

Markov model applications to chemical senses and molecular recognition

Seeking applicants for a collaborative 2 year postdoctoral project, one year in Berlin, one year in Israel, in one of the following topics:

- 1) Exploring functional dynamics of taste receptors
- 2) Classification of taste receptors using Hidden Markov models
- 3) Applying Markov model to problems of protein-peptide recognition

If funded, the fellowship will begin October 1st, 2015

Interested candidates should contact
